

The background of the slide features a tall, black and white striped lighthouse on the left side, set against a dark, moody sky. The lighthouse has a glowing light at the top. The overall color palette is dominated by dark blues and greys, with a bright blue diagonal shape that cuts across the middle of the slide, serving as a backdrop for the main text.

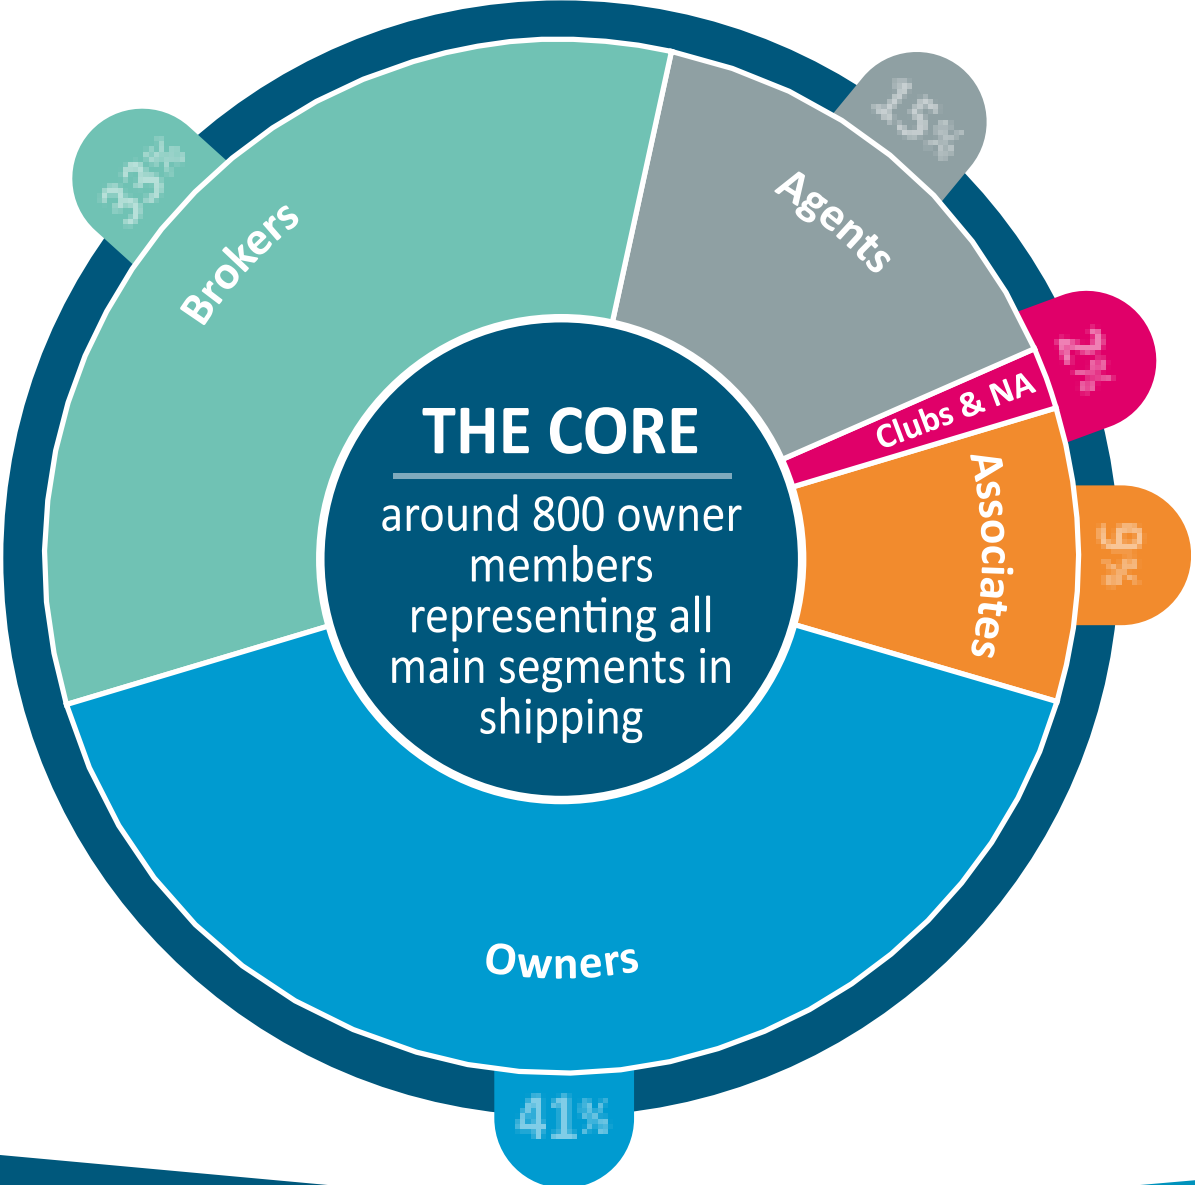

Making cyber risk management tangible and efficient

Jakob P. Larsen, Head of Maritime Security

1st CSN Cyprus Shipping ICT Conference, 24 September 2020

The BIMCO Membership

BIMCO's share of world cargo fleet 58%

Share of world cargo fleet
(DWT)

Top 10 membership fleet
(million DWT)

BIMCO's 4 core services

Products

- contracts and clauses
- SmartCon
- Shipping KPI
- publications

Training

- face-to-face courses
- webinars
- tailor-made courses

Regulation

- NGO at IMO
- regular engagement with regional regulators

Information & advice

Ships

- technical
- environmental
- safety
- security

Commercial

- chartering support
- port and cargo databases
- credit risk
- debt recovery
- fraud alerts
- market analysis

Copenhagen, 27 June 2017

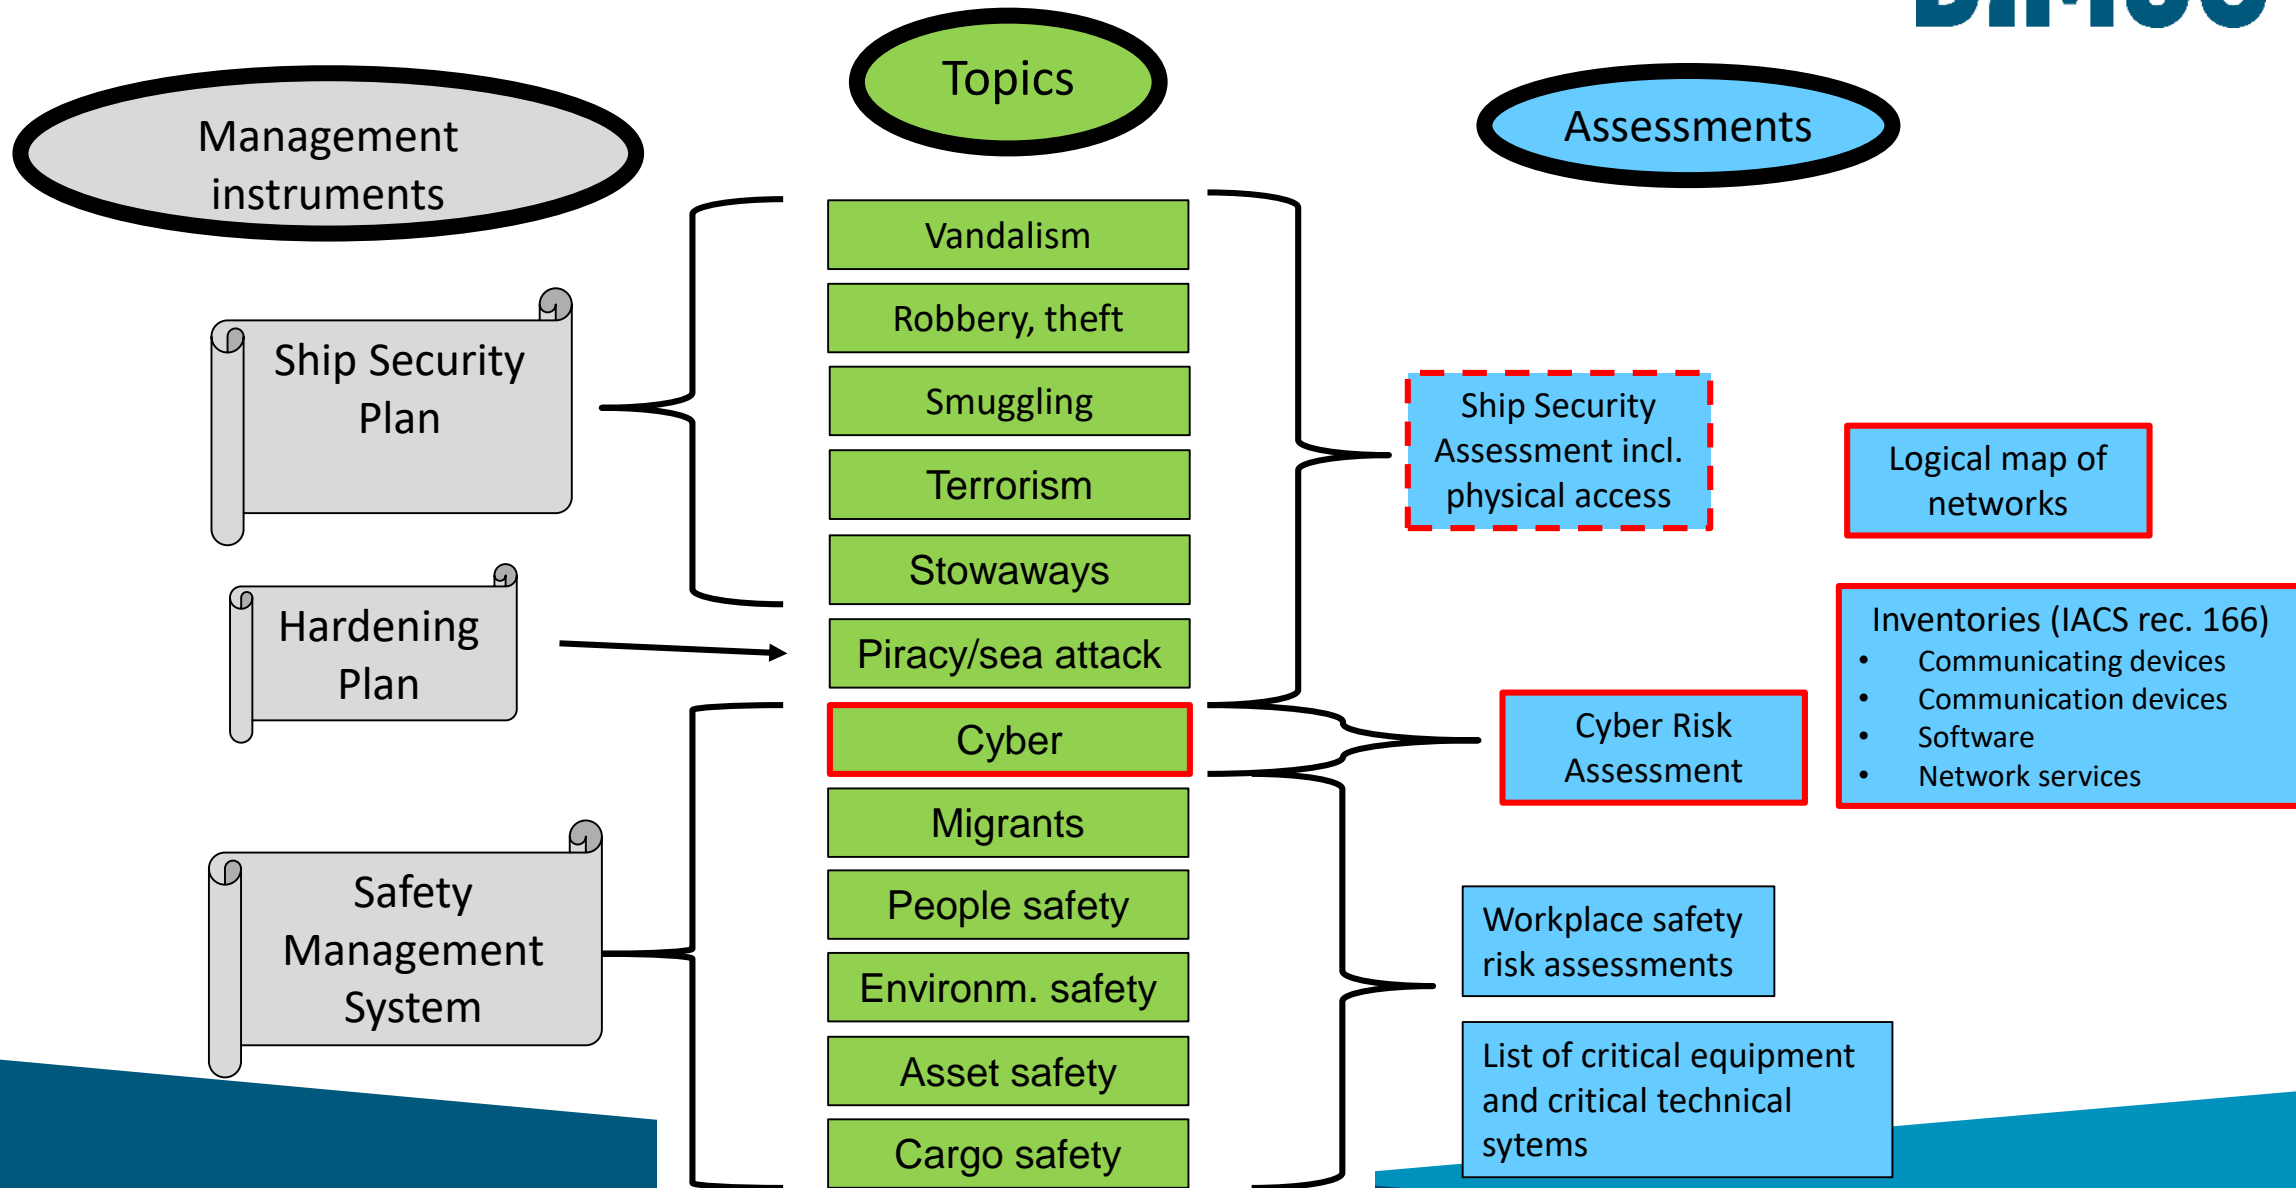

IMO resolution MSC.428(98) Maritime cyber risk management in safety management systems

- An approved safety management system should take into account cyber risk management in accordance with the objectives and functional requirements of the ISM Code
- Administrations to ensure that cyber risks are appropriately addressed in safety management systems no later than the first annual verification of the company's Document of Compliance after 1 January 2021
- precautions [...] could be needed to preserve the confidentiality of certain aspects of cyber risk management

Managing cyber risks: a practical example

Risk assessment

ISM Code 1.2.2

“Safety management objectives of the company should, inter alia:

1. [...]
2. assess all identified risks to its ships, personnel and the environment and establish appropriate safeguards”

Looking closer at risk as a concept

$$\text{Risk} = \text{Impact} \times \text{Vulnerability} \times \underbrace{(\text{Capability} \times \text{Opportunity} \times \text{Intent})}_{\text{Threat}}$$

Evaluating threats

Examples:

- ❖ Phishing
- ❖ Malware
- ❖ Hacking
- ❖ Social engineering
- ❖ Denial of service

- ❖ Internet
- ❖ Wifi
- ❖ Removable devices
- ❖ Physical access

- ❖ Financial gain
- ❖ Vandalism
- ❖ Personal motives
- ❖ Political motives

Applicable to

- OT systems
- IT systems

Risk matrix

Likelihood (scale 1 – 5) ↑

5	5	10	18	20	25
4	4	8	12	16	20
3	3	6	9	12	15
2	2	4	6	8	10
1	1	2	3	4	5
	1	2	3	4	5

→ Impact (scale 1 – 5)

Risk score matrix (scale 1 – 25)

Risk score 1 – 5 = **Low Risk**

Risk score 6 – 10 = **Medium Risk**

Risk score 11 – 19 = **High Risk**

Risk score 20 – 25 = **Extreme risk**

Using existing SMS methodology

System	Impact	Likelihood	Initial Risk	Mitigation	Residual risk
ECDIS	Score 5 due to risk of catastrophic events like grounding and collision	Score 4 due to active USB ports, computer used for other purposes, connection to admin network for access to shared printer, connection to automatic chart updates via satellite via trusted vendor	Risk = 5 x 4 = 20	Password protect and restrict PC use to ECDIS only	Risk = 5 x 3 = 15
				Disconnect from admin network	Risk = 5 x 2 = 10
				Blind off USB ports	Risk = 5 x 1 = 5

Risk score matrix (scale 1 – 25)

- Risk score 1 – 5 = **Low Risk**
- Risk score 6 – 10 = **Medium Risk**
- Risk score 11 – 19 = **High Risk**
- Risk score 20 – 25 = **Extreme risk**

Immediate steps

- Map remote accesses and data flows
- Segregate critical systems' networks (this reduces opportunity)
- Protect access to shipboard computers and systems (firewall, password management, removable media ports, physical access control)
- Protect email and other internet facing systems and software (antivirus)
- Initiate awareness training of all staff
